SYSPRO 8:
The Investment that Results in Business Drivers

1

Enhance your Payment Processes

- Streamline payment reminders for unpaid invoices
- Templatize period payment reminders
- Categorize your customers into specific groups
- Define statuses that determine the format of the reminder letters

2

Boost Diagnostics with GL Balancing

- Balance SYSPRO submodules to the General Ledger
- Detect discrepancies that occur due to data corruption, unposted journal entries, or journals being edited before posting to the GL

3

Refine your Balance Routine

- The Balance Routine has been de-coupled from the month-end and year-end processing routines and created as a separate business object
  - The system will no longer first perform this function when running month-end or year-end, vastly reducing processing time

4

Improve the Payment Cycle

- No longer is there a need to print a check remittance
- Opt to print checks and remittance advices combined on pre-printed stationery, separately, or not at all
